<i>Foreword</i>	xv
<i>Preface</i>	xvii

1. Introductory Survey of the Atmosphere	1–15
1.1 Introduction 1	
1.2 Origin and Composition of the Atmosphere 2	
1.3 Distribution of Pressure and Density 4	
1.4 Ionosphere, Atmospheric Electric Field and Magnetosphere 6	
1.5 Distribution of Temperature and Winds 8	
1.5.1 Distribution of Temperature 8	
1.5.2 Distribution of Winds 11	
1.6 Atmosphere as a Fluid and Fluid Continuum 13	
1.7 Physical Laws 13	
1.8 Determinism and Chaos 14	
<i>Review Questions</i> 15	
2. Atmospheric Observations	16–34
2.1 Overview and Importance of Meteorological Observation 17	
2.2 Measurement of Temperature and Humidity 18	
2.2.1 Temperature Measurement 18	
2.2.2 Humidity Measurement 21	
2.3 Measurement of Wind and Pressure 22	
2.3.1 Wind Measurement 22	
2.3.2 Atmospheric Pressure Measurement 24	
2.4 Measurement of Precipitation 25	
2.5 Modern Meteorological Instruments 26	

2.6	Surface and Upper Air Observational Network	27
2.6.1	Surface Observational Network	27
2.6.2	Radar Network	28
2.6.3	Upper Air Observational Network	28
2.7	Satellite Observation	31
	<i>Review Questions</i>	33
3.	Atmospheric Thermodynamics	35–75
3.1	Gas Laws and Equation of State for a Mixture of Ideal Gases	36
3.1.1	Mixture of Gases	37
3.2	Work, Heat and First Law of Thermodynamics	38
3.2.1	Work	38
3.2.2	Work Done by a System Expanding against External Forces	39
3.2.3	Heat	41
3.2.4	First Law of Thermodynamics	41
3.2.5	Internal Energy and Enthalpy	42
3.2.6	Specific Heat Capacity	44
3.3	Adiabatic Processes	46
3.4	Moist Thermodynamics and Latent Heats	47
3.4.1	Measures of Water Vapour in Air	47
3.4.2	Equation of State of Moist Air	48
3.4.3	Latent Heat	49
3.5	Hydrostatic Equilibrium	49
3.5.1	Geopotential	50
3.5.2	Scale Height and Height Computations Using the Hypsometric Equation	51
3.5.3	Reduction of Pressure to Sea Level	54
3.6	Thermodynamic Diagram	55
3.6.1	Emagram	55
3.6.2	Tephigram	55
3.6.3	Skew T -log p Diagram	56
3.6.4	Stuve Diagram	56
3.7	Hydrodynamic Stability—Parcel and Slice Methods	56
3.7.1	Saturated Adiabatic and Pseudoadiabatic Processes	56
3.7.2	Saturated Adiabatic Lapse Rate	57
3.7.3	Equivalent Potential Temperature	57
3.7.4	Stability Criteria Using Parcel Method	59
3.7.5	Stability Criteria Using Slice Method	63
3.7.6	Entrainment Effects	65
3.8	Entropy and Second Law of Thermodynamics	67
3.8.1	Entropy	67
3.8.2	Second Law of Thermodynamics	68
3.8.3	Heat Engines and Refrigeration Cycles	69

3.9 Carnot Cycle and Clausius Clapeyron Equation	70
3.9.1 Carnot Cycle	70
3.9.2 Clausius Clapeyron Equation	71
<i>Solved Examples</i>	72
<i>Review Questions</i>	74
4. Radiation	76–104
4.1 Spectrum of Radiation	76
4.1.1 Overview	77
4.1.2 Electromagnetic Spectrum of Radiation	78
4.2 Black Body Radiation	78
4.2.1 Planck's Law	79
4.2.2 Local Thermodynamical Equilibrium	81
4.2.3 Radiometric Quantities	82
4.3 Atmospheric Absorption of Solar Radiation	85
4.3.1 Absorption and Emission of Radiation by Molecules	85
4.3.2 Absorptivity and Emissivity	85
4.3.3 Kirchhoff's Law	87
4.3.4 Reflectivity and Transmittivity	87
4.3.5 Absorption of Solar Radiation by Atmosphere	87
4.3.6 Indirect Estimate of Solar Irradiance at the Top of the Atmosphere	89
4.3.7 Vertical Profile of Absorption	90
4.4 Scattering of Solar Radiation	91
4.5 Atmospheric Absorption and Emission of Infrared Radiation	92
4.6 Remote Temperature Sounding from Space	94
4.6.1 Calculation of the Surface Temperature	95
4.6.2 Two-layer Atmospheric Temperature Profile	96
4.6.3 Multi-layer Atmospheric Temperature Profile	97
<i>Solved Examples</i>	100
<i>Review Questions</i>	103
i. Clouds and Precipitation	105–148
5.1 Atmospheric Aerosols	105
5.1.1 Aerosol Size and Concentration	106
5.1.2 Sources and Sinks of Atmospheric Aerosol	108
5.2 Nucleation of Water Vapour Condensation	109
5.2.1 Thermodynamic Potentials	109
5.2.2 Nucleation Theory of Water Vapour Condensation	111
5.2.3 Cloud Condensation Nuclei	117
5.3 Droplet Growth in Warm Clouds	118
5.3.1 Overview	118
5.3.2 Growth of Cloud Droplets in Warm Clouds by Condensation	119

5.3.3	Growth of Cloud Droplets by Collision and Coalescence	122
5.3.4	The Continuous Collision Model	124
5.3.5	The Stochastic Collision Model	126
5.4	Formation and Growth of Ice Crystals in Cold Clouds	127
5.4.1	Homogeneous Nucleation of Ice Particles	127
5.4.2	Ice Nuclei	128
5.4.3	Bergeron Process	128
5.4.4	Growth Rate of Ice Crystals by Deposition	129
5.4.5	Hail Formation	130
5.4.6	Radiative Effects of Clouds	131
5.5	Mechanisms of Cloud Formation and Cloud Seeding	132
5.5.1	Mechanisms of Cloud Formation	132
5.5.2	Types of Clouds	133
5.5.3	Convective Clouds	135
5.5.4	Cloud Seeding	137
5.6	Role of Clouds and Precipitation Products in Charge Separation	138
5.6.1	Distribution of Charges in a Thunderstorm	138
5.6.2	Mechanisms for Charge Separation	139
5.6.3	Lightning Discharge	141
	<i>Solved Examples</i>	142
	<i>Review Questions</i>	147

6. Governing Laws of Atmospheric Motion 149–180

6.1	Equation in a Rotating Coordinate System—Centripetal and Coriolis Acceleration	150
6.1.1	Introduction	150
6.1.2	Rotating Frame of Reference	151
6.1.3	Equation of Motion in an Inertial Frame of Reference	153
6.2	Gravity and Pressure Gradient Forces	154
6.2.1	Pressure Gradient Force	154
6.2.2	Gravitational Force	155
6.2.3	Equation of Motion in a Rotating Coordinate System	155
6.2.4	Effects of Coriolis Force	156
6.2.5	Flow of Rivers on the Surface of the Earth	156
6.2.6	Effects of Coriolis Force Due to Relative Motion along a Latitude Circle	157
6.2.7	Effects of Coriolis Force Due to Relative Motion along a Meridian	158
6.2.8	Effects of Coriolis Force Due to Vertical Motion	159
6.2.9	Rossby Number	159
6.2.10	Gravity	160
6.3	Total, Local and Convective Derivatives	161

6.4	Continuity Equation	162
6.4.1	Eulerian Approach	162
6.4.2	Lagrangian Approach	164
6.5	Equations of Motion and Equations for Horizontal Flow	165
6.5.1	Equations of Motion in Spherical Coordinates	165
6.5.2	Scale Analysis of the Equations of Motion	167
6.5.3	f -plane and β -plane Approximations	168
6.5.4	Geostrophic Wind	169
6.5.5	Isallobaric Wind	170
6.5.6	Natural Coordinate System	170
6.5.7	Inertial Flow	172
6.5.8	Cyclostrophic Flow	173
6.5.9	Gradient Flow	174
6.6	Thermal Wind	176
6.7	Thermodynamic Energy Equation	178
<i>Solved Examples</i>		180
<i>Review Questions</i>		185
7.	Atmospheric Motion	187–213
7.1	Circulation and Vorticity	188
7.1.1	Vorticity	188
7.1.2	Decomposition of a Linear Velocity Field	188
7.1.3	Circulation	190
7.1.4	Kelvin's Circulation Theorem	192
7.1.5	Bjerknes' Circulation Theorem	193
7.1.6	Applications of Circulation Theorem	194
7.1.7	Vorticity in the Natural Coordinate System	195
7.2	Isobaric Coordinate System	196
7.2.1	Horizontal and Time Derivatives in Isobaric Coordinate System	197
7.2.2	Continuity Equation in Isobaric Coordinate System	199
7.2.3	Horizontal Equation of Motion in Isobaric Coordinate System	200
7.2.4	Geostrophic and Thermal Wind Equations in Isobaric Coordinates	200
7.3	Vorticity and Divergence Equations	201
7.3.1	Vorticity Equation	201
7.3.2	Divergence Equation	203
7.4	Absolute and Potential Vorticity	203
7.4.1	Absolute Vorticity	204
7.4.2	Potential Vorticity	204
<i>Solved Examples</i>		207
<i>Review Questions</i>		212

8. Atmospheric Boundary Layer	214–238
8.1 Brief Consideration	214
8.2 Definition of Viscosity	214
8.3 Expression for Viscosity from Kinetic Theory	215
8.4 Viscous Forces in the Equation of Motion	217
8.5 Turbulence	219
8.6 Turbulence and Diffusion	220
8.7 Equations of Mean Motion in Turbulent Flow	221
8.8 Mixing Length	223
8.9 Surface and Ekman Layers	225
8.9.1 Surface Layer	225
8.9.2 Ekman Layer	227
8.10 Secondary Circulations and Spin-down in the Atmosphere	229
8.11 Secondary Circulations and Spin-down in a Teacup	231
<i>Solved Examples</i>	233
<i>Review Questions</i>	238
9. Waves in the Atmosphere	239–267
9.1 Rossby Waves	239
9.1.1 Perturbation Method	240
9.1.2 Some Basic Properties of Waves	240
9.1.3 Rossby Waves in a Barotropic Atmosphere	241
9.2 Gravity Waves in Shallow Water	244
9.3 Orographic and Sound Waves	246
9.3.1 Orographic Waves	246
9.3.2 Sound Waves	248
9.4 Internal Gravity Waves	250
9.5 Equatorial Waves	252
9.5.1 Shallow Water Equations	252
9.5.2 Equatorial Rossby and Rossby Gravity Waves	256
9.5.3 Mixed Rossby Gravity Waves	260
9.5.4 Equatorial Kelvin Wave	261
<i>Solved Examples</i>	263
<i>Review Questions</i>	266
10. Large-scale Meteorological Systems in Mid-Latitudes	268–279
10.1 General Considerations	268
10.1.1 Air Masses	269
10.2 Fronts	270
10.2.1 Warm Front	270
10.2.2 Cold Front	272
10.2.3 Stationary Front	272
10.2.4 Occluded Front	273

10.3	Extratropical Cyclone	273
10.4	Jet Streams	275
	<i>Review Questions</i>	278
11.	Meteorological Systems in Low Latitudes	280–326
11.1	General Considerations	280
11.2	Monsoons	281
11.2.1	Differential Heating of Land and Sea	287
11.2.2	Compressibility, Rotation and Moisture Effects	288
11.2.3	Tropical and Oceanic Convergent Zones	289
11.2.4	Intraseasonal and Interannual Variability of the Indian Monsoon	290
11.3	Monsoon Disturbances and Semipermanent Monsoon Systems Over India	295
11.3.1	Monsoon Disturbances	295
11.3.2	Semipermanent Monsoon Systems Over India	298
11.4	Tropical Cyclones	300
11.4.1	Factors Responsible for the Formation of Tropical Cyclone	301
11.4.2	Climatology of Tropical Cyclones	302
11.4.3	Movement of Tropical Cyclones	303
11.4.4	Life Cycle of a Tropical Cyclone	306
11.4.5	Tropical Cyclone Structure	308
11.4.6	Eye and the Eyewall	311
11.5	Thunderstorms and Tornadoes	312
11.5.1	Thunderstorms	312
11.5.2	Life Cycle of Thunderstorms	313
11.5.3	Severe Thunderstorms and Squall Lines	315
11.5.4	Tornadoes	316
11.6	El Niño-Southern Oscillation	316
11.6.1	Overview of ENSO	317
11.6.2	Indian Ocean Dipole	323
11.6.3	ENSO and Indian Monsoon	323
	<i>Review Questions</i>	324
12.	Global Energy Balance	327–344
12.1	Globally-averaged Atmospheric Energy Balance	327
12.1.1	Global Energy Balance Requirement for the Earth's Atmosphere	328
12.1.2	Global Energy Balance at the Earth Surface	330
12.1.3	Estimates of the Global Energy Balance for the Earth–Atmospheric System	332
12.1.4	Energy Processes in the Upper Atmosphere	333

12.2 Internal, Potential and Kinetic Energy	334
12.2.1 Internal and Potential Energy	334
12.2.2 Kinetic Energy	335
12.3 Conversion of Potential and Internal Energies to Kinetic Energy	336
12.3.1 Available Potential Energy	336
12.4 Generation and Frictional Dissipation of Kinetic Energy	338
12.4.1 Generation of Kinetic Energy	338
12.4.2 Frictional Dissipation of Kinetic Energy	340
12.5 Atmosphere as a Heat Engine	343
<i>Review Questions</i>	343
13. General Circulation	345–359
13.1 General Consideration	346
13.1.1 Overview	346
13.1.2 Observed Meridional Cross-section of Longitudinally-averaged Zonal Wind and Temperature	347
13.1.3 Longitudinally-dependent Flow	349
13.1.4 Requirement on Theories of General Circulation	350
13.2 Meridional Circulation Model—Hadley Circulation	351
13.3 Angular Momentum Balance	353
13.4 Dishpan Experiments	358
<i>Review Questions</i>	359
14. Numerical Modelling of the Atmosphere	360–389
14.1 General Considerations	360
14.1.1 Overview	361
14.1.2 The Finite Difference Method	362
14.1.3 Partial Differential Equations	363
14.2 Modern Numerical Weather Prediction	370
14.2.1 Overview	370
14.2.2 Observations	371
14.3 Data Assimilation	371
14.3.1 Overview	371
14.3.2 Objective Analysis	372
14.3.3 Initialization	373
14.3.4 Data Assimilation Cycle	374
14.4 Spectral and Finite Element Methods	375
14.4.1 Galerkin Method	375
14.4.2 Spectral Method	377
14.4.3 Finite Element Method	378
14.5 Challenges in Weather and Climate Forecasts	380
14.5.1 Weather Forecasting—A Historical Perspective	380
14.5.2 Ensemble Forecasting	383
14.5.3 Climate Forecasting	385
<i>Review Questions</i>	388

15. Chaos in the Atmosphere	390-409
15.1 Illustrative Example of Chaos—Forced Pendulum	391
15.2 Poincare Section and Lyapunov Exponents	393
15.3 Period Doubling and Route to Chaos	397
15.4 Bouncing Ball Problem	400
15.5 Lorenz Attractor	403
15.6 Limits of Deterministic Predictability	407
Review Questions	408
<i>Appendix 1 Useful Universal Physical Constants</i>	<i>411-412</i>
<i>Appendix 2 Vector Identities</i>	<i>413-415</i>
<i>Appendix 3 Atmospheric Ozone</i>	<i>416-418</i>
<i>Appendix 4 Equations of Motion in Spherical Coordinates</i>	<i>419-420</i>
<i>Appendix 5 Relaxation Methods</i>	<i>421-422</i>
<i>Appendix 6 Von Neumann Stability Analysis</i>	<i>423-425</i>
<i>Appendix 7 Fortran Computer Program for Numerical Solution of the Barotropic Vorticity Equation</i>	<i>426-429</i>
<i>Appendix 8 Fortran Computer Program for Numerical Solution of the Shallow Water Equation</i>	<i>430-434</i>
<i>Appendix 9 Fortran Computer Program for Numerical Solution of the Forced Damped Pendulum</i>	<i>435-436</i>
<i>Appendix 10 Fortran Computer Program for Numerical Solution of the Lorenz System</i>	<i>437-438</i>
<i>Bibliography</i>	<i>439-440</i>
<i>Index</i>	<i>441-446</i>
